

**SEX OFFENDERS IN SOUTH CAROLINA:  
AN OVERVIEW OF THE POPULATION  
AND  
THE NEXUS OF COMMUNITY SUPERVISION AND MENTAL  
HEALTH SERVICES**

**Charles Bradberry  
Diana Tester**

**August 2005**

## Foreword

This report represents a collaborative effort among the South Carolina Department of Probation, Parole and Pardon Services, the South Carolina Department of Mental Health, the South Carolina Budget and Control Board, Office of Research and Statistics and the South Carolina Department of Public Safety. Important technical assistance was provided by the State Law Enforcement Division. The object of this collaboration was to gain a better understanding of the sex offender population in South Carolina and to determine what mental health services those offenders receive while under community supervision. While these objectives were realized, and the findings outlined in the report, perhaps more importantly, additional knowledge was gained regarding the potential and limitations of the computerized criminal history records as a data source. The ability to access and link criminal history records to the client records of other criminal and social service agencies is critical to providing important outcome measures for a myriad of government programs.

This publication was funded by \$15,000 from Federal Grant Number 2003-BJ-CX-K102 awarded by the United States Department of Justice, Bureau of Justice Statistics. Points of view or opinions stated are those of the principal researcher and do not necessarily represent the opinion or official position of the United States Department of Justice.

## **SEX OFFENDER DATA ANALYSIS**

### ***Introduction***

The Office of Research and Statistics (ORS) of the South Carolina Budget and Control Board, under a contract from the Office of Justice Programs of the South Carolina Department of Public Safety, was charged with the task of analyzing the State Division of Law Enforcement's (SLED) Computerized Criminal History (CCH) database, the client database of the South Carolina Department of Probation, Parole, and Pardon Services (SCDPPPS), and the client database of the South Carolina Department of Mental Health. The purpose of this analysis was to: 1) identify offenders who have been convicted of any type of sex crime, 2) determine which, if any, of these sex offenders have ever been diagnosed with a mental disorder at any state outpatient mental health facility; and, 3) determine if any of the identified sex offenders who have been diagnosed with a mental condition are currently under the supervision of the SCDPPPS or, previously, have been supervised by the SCDPPPS. It should be noted that SLED's CCH records crimes that were committed in South Carolina only. Therefore, individuals convicted of sex crimes in other states, and now living in South Carolina, may not be identified through the analysis presented herein. Also, this study does not involve SLED's Sex Offender Registry, but many of the offenders in this study are also required to register as sex offenders. The Sex Offender Registry includes those offenders who moved to South Carolina from other states and were required to register, but may not have committed any crimes in South Carolina. These offenders would not be included in SLED's CCH file and would, therefore, not be included in this study. The Sex Offender Registry also includes offenders who may have been arrested for a sex offense, were convicted of a non-sex offense, but were ordered by the sentencing judge to register. Only offenders convicted of a sex offense are included in this report.

A working group called the Sex Offender Study Committee (SOSC), comprised of researchers/representatives from the SCDPPPS, the DMH, the Department of Public Safety (DPS) and from the Office of Research and Statistics (ORS) of the South Carolina Budget and Control Board, was assembled for the purpose of guiding the research and for providing expertise and knowledge of their respective agency's client information systems. This working group met monthly for approximately six to eight months to review analyses, to discuss data issues, to assist in data interpretation, and to guide the direction of further analyses.

### ***Background and Analyses***

In order to conduct the analysis, the Office of Research and Statistics obtained an extract of SLED's computerized criminal history (CCH) database, an extract of all client records, including active and closed cases, from the SCDPPPS, and, an extract of the client database from the South Carolina Department of Mental Health (DMH). Memoranda of Understanding (MOU) were signed with these agencies for the purpose of conducting this analysis.

The databases used in this analysis have some limitations which should be noted here. The extract that ORS received from any state mental health outpatient facility contained client-level data only from 1996 through December 2004. Also, only those individuals who sought treatment at any of the seventeen (17) community mental health centers around the state are recorded in this database; therefore, information presented herein from the DMH pertain only to those individuals who received *outpatient* treatment services. Mental health services obtained from public or private inpatient hospitalizations or emergency department visits, from private-sector mental health providers, military facilities, or veteran's hospitals are also not recorded in the DMH database.

The SLED CCH database was not designed for the purpose of conducting research, and, therefore, does not lend itself *easily* to the types of analyses that were needed for this report. As examples:

*The CCH field which contains sentencing information is a free-flowing text field (no numeric codes) and there is very little consistency in how similar criminal sentences are recorded – abbreviations are frequently used, and there appears to be no uniformity with these abbreviations.*

*There are two fields or variables in the judicial section of the CCH file that contain offense conviction codes – one was designed to provide a code that matches, exactly, the state statute under which the offender was convicted (described in more detail below); however, a previous analysis showed that this field is incomplete and was determined to not be useful for the purposes of this current analysis. The other field contains codes which are not, in the majority of cases, specific to state statutes, are more general in nature, and are similar to National Crime Information Center (NCIC) codes but have been modified over the years to represent, in some cases, state statutes. This variable was used in this study to estimate, as accurately as possible, the number of convicted sex offenders in South Carolina.*

*Criminal sentencing data are obtained from three sources, all of which are recorded on the SLED CCH database: 1) when an offender is committed to the South Carolina Department of Corrections (SCDC), sentencing information is sent to SLED from SCDC and is recorded on the SLED database; 2) when an offender is admitted to the custody/jurisdiction of the SCDPPPS, sentencing information is sent to SLED from SCDPPPS and is recorded on the SLED database; and, 3) sentencing information is sent to SLED from the Division of Court Administration of the South Carolina Judicial Department, and is recorded on the SLED CCH database. The sentencing information obtained from these three sources may each be recorded differently, i.e., wording may be slightly different, on the SLED CCH database, but they attempt to describe the same sentencing information.*

In the late 1980s or early 1990s, the Division of Court Administration of the South Carolina Judicial Department developed a four-digit Criminal Docket Report (CDR) code for

each of the South Carolina criminal statutes. On a daily basis, SLED accesses Court Administration's computerized circuit court disposition database and downloads data relating to the disposition of criminal cases. Data elements downloaded from this database include the statute citations, CDR codes, statute descriptions, disposition dates, sentencing information, warrant numbers, etc. SLED also receives disposition data, and CDR codes, from the South Carolina Department of Corrections (SCDC) and from the Department of Probation, Parole, and Pardon Services. When an offender is received by one of these agencies, a form is filled out that includes the date received by the agency as well as the offense information, including the CDR code for those offenses. These forms are then sent to SLED where they are entered into its database. SCDC sends most of these forms electronically to SLED. Also when a SCDC inmate goes back to court on additional charges, the disposition of those charges are sent to SLED as well. That information is sent weekly to SLED on a computer disk.

In a previous study it was determined that when SLED receives an electronic transmission of data from Court Administration, it reads those data elements and records them onto the judicial segment of its CCH database. However, the computer program at SLED that is used to write the information it receives from Court Administration to its CCH files did not write the CDR code, nor did it write the Felony/Misdemeanor designation indicator to the SLED database. (This has now been corrected.) The programs do *read* these data elements from the Court Administration files; however, they did not *write* these two particular data elements onto the judicial segment of the CCH files. SLED does record the SCDC and SCDPPPS data and writes those data elements, including the CDR code and the Felony/Misdemeanor indicator, to SLED's CCH files.

This study uses SLED's CCH file, and specifically, the judicial segment of the CCH file, to create a file for analysis purposes that consist of all offenders who have been convicted of sex crimes in South Carolina. The Office of Research and Statistics obtained an extract of the entire SLED CCH file in November, 2004. This file contains all criminal information current to that date. The SLED began computerizing its criminal history information in the early 1970s. Anyone who was arrested in South Carolina, beginning at that time, had his/her *entire* criminal record entered into the SLED CCH database. This means that an individual who was arrested after SLED computerized its criminal records in the early 1970s, then that individual's entire criminal history was entered into the database, even if there were arrests prior to SLED's computerization. Therefore, the CCH database may contain arrest and disposition information from as far back as the 1920s and earlier.

### ***Sex Offenders***

From the SLED CCH database, the number of individuals convicted of any type of sex crime in South Carolina has been determined to be 6,951. Appendix I is a nearly complete listing (N=6,187) of the types of sex crimes for which individuals have been convicted of in South Carolina. This listing is sorted, in descending order, by the number of occurrences for each type of sex conviction. As can be seen in this listing, *Criminal Sexual Conduct with a Minor* is the single most frequent type of sex crime for which individuals have been convicted of in South Carolina.

The SOSC decided to examine more recent information regarding sex offenders in South Carolina. The SOSC decided that a cohort of offenders convicted of sex offenses between CY1995-2004 should be examined. Appendix II provides information regarding not only sex offenders convicted during this period, but also provides information regarding the total number of all records during this period that contain CDR codes as well as the number of records that do not contain these codes. The table in Appendix II indicates that between CY1995-2004 there are a total of 1,996,736 judicial records of which 1,906,178 (95.5%) contain missing CDR codes. (It should be noted that the ORS received an extract of the SLED CCH database file in November, 2004, therefore, information for CY2004 is incomplete.) This table also indicates that during this time period, there were 5,851 sex offense convictions. These 5,851 sex convictions were committed by 3,003 offenders. The following table (Table 1) indicates the number of sex convictions of these 3,003 sex offenders. This table indicates that 1,286 (42.82%) sex offenders were convicted of only one (1) sex offense during this period and 1,121 (37.33%) were convicted of two (2) sex offenses. One (1) sex offender was convicted of 22 sex offenses during this period.

**TABLE 1**

***Convicted Sex Offenders – Sex With Minors***

Because the single largest group of offenders convicted of sex offenses is the “sex with minors” category, the SOSC decided to explore this group of offenders in more detail. Because the SLED CCH file does not contain a code or codes which could be used to determine the exact number of offenders who have been convicted of any type of “sex with minors” offenses, a program was used to list all offenders who had been convicted of any type of sex crime, sorted in descending order by the number of cases for each type of sex crime. The literal text description of the offense conviction was printed, along with the number of offenders who were convicted of those particular offenses. This listing was used to pick out the specific types of “sex with minors” offenses contained in the SLED database that had a frequency of three (3) or more. Therefore, this particular analysis examines most, but not all, “sex with minor” offenders. Appendix III contains a listing of the “sex with minors” offenses that were used in this analysis.

The following table (Table 2) indicates that 1,672 offenders from this listing were convicted of 3,233 “sex with minors” offenses. Over half (57.9%) were between the ages of 18 and 35 at the time of arrest. Black offenders were younger at time of arrest than were white offenders.

**TABLE 2**

***Convicted Sex Offenders With A Mental Illness Diagnosis***

In order to determine whether or not any of the 6,951 individuals who have ever been convicted of a sex crime in South Carolina were diagnosed with a mental illness by the South Carolina Department of Mental Health, it was necessary to obtain an extract of the entire client

database from the DMH and match the sex offenders to that database. The Office of Research and Statistics has developed a process that assigns a unique identifier to each individual from every database it obtains from state agencies in South Carolina. This unique identification process has proven to be extremely accurate (i.e., extremely low false positives) in creating a unique identification number for almost every individual contained on the client databases it receives from other agencies by using such information as client name, race, sex, date of birth, social security number, and others. The extract of the client information database that the ORS receives from the Department of Mental Health contains only those clients who received outpatient mental health services since 1996 and were entered into the DMH client information system. Therefore, if one of these sex offenders was treated by a DMH community mental health facility prior to 1996 and s/he had no contact with DMH in 1996 or thereafter, then there would be no match.

The matching process determined that 1,101 (15.84%) of the 6,951 sex offenders received mental health services from the DMH between 1996 and 2004. Table 3 (below) indicates the types of mental health diagnoses these 1,101 sex offenders received from the DMH. A description of the terms used in Table 3 is found in Appendix IV. Table 4 indicates the number of diagnoses these 1,101 received. Table 5 shows the number of services that these sex offenders received from the Department of Mental Health.

**TABLE 3  
DEPARTMENT OF MENTAL HEALTH DIAGNOSES

**TABLE 4  
NUMBER OF DIAGNOSES OF  
CONVICTED SEX OFFENDERS**

<b>Number of Diagnoses</b>	<b>Number of Sex Offenders</b>	<b>Percent of Sex Offenders</b>	<b>Cumulative Number of Sex Offenders</b>	<b>Cumulative Percent of Sex Offenders</b>
1	547	49.68	547	49.68
2	326	29.61	873	79.29
3	165	14.99	1,038	94.28
4	45	4.09	1,083	98.37
5	15	1.36	1,098	99.73
6	2	0.18	1,100	99.91
7	1	0.09	1,101	100.00

**TABLE 5  
Number of Types of DMH Outpatient Services Received By Convicted Sex Offenders**

<b>Number of Types of Services</b>	<b>Number of Sex Offenders</b>	<b>Percent of Sex Offenders</b>	<b>Cumulative Number of Sex Offenders</b>	<b>Cumulative Percent of Sex Offenders</b>
1	337	30.61	337	30.61
2	252	22.89	589	53.5
3	206	18.71	795	72.21
4	136	12.35	931	84.56
5	91	8.27	1,022	92.82
6	50	4.54	1,072	97.37
7	29	2.63	1,101	100.00

Table 5 indicates that 337 (30.6%) of the 1,101 sex offenders received only one (1) type of outpatient service from the Department of Mental Health. Table 6, below, shows how many outpatient services these 1,101 sex offenders received from the Department of Mental Health. Nearly one-third (32.06%) of these offenders received only one (1) or two (2) outpatient services from the DMH. About twenty percent (19.16%) of these sex offenders received more than 25 outpatient services from the DMH.

**TABLE 6  
Number of DMH Outpatient Services Received By Convicted Sex Offenders**

<b>Number of Services</b>	<b>Number of Sex Offenders</b>	<b>Percent of Sex Offenders</b>

More Than 25	211	19.16
Total	1,101	100.00

***Convicted Sex Offenders Under the Jurisdiction of the Department of Probation, Parole and Pardon Services***

Of the 6,951 convicted sex offenders identified from the SLED CCH database, 566 (8.1%) are active clients of the South Carolina Department of Probation, Parole and Pardon Services (SCDPPPS). Another 3,807 (54.77%) convicted sex offenders are not currently active (closed); 2,099 (30.2%) have never been a client of the SCDPPPS, and the remaining seven percent are either being supervised in another state, are institutionalized (most in jail or prison), absconded, or are under federal jurisdiction.

Of the 566 active SCDPPPS clients who were convicted sex offenders as identified from the SLED CCH database, 143 (25.26%) received services from the Department of Mental Health. Table 7, below, shows the types of DMH outpatient services received by these 143 active PPP clients and Table 8 shows the number of DMH outpatient services received by these individuals. Appendix V list the mental health diagnoses of all of the convicted sex offenders in South Carolina including the SCDPPPS and the non-SCDPPPS clients.

**TABLE 7**

***Conclusion***

The ability to link state agency databases together in South Carolina using a unique identifier is an emerging, evolving, and exciting technical development for the state of South Carolina. The development of this capability has taken many years and, only recently, have we been able to explore the linkages among state agency databases in some detail. This report is the first attempt to link criminal justice databases (i.e., SLED and SCDPPPS) with a service agency such as the Department of Mental Health. The findings in this report are somewhat surprising and raise many questions that, hopefully, future studies will be able to address. For example, it was somewhat surprising that “sex with minors” was such a large percentage of all convicted sex offenders. An exploration of the relationship(s) between the offender(s) and the victim(s) of these particular types of sex crimes would most likely yield interesting results and provide policymakers with knowledge and tools to develop strategies for preventing or reducing these

types of offenses. SLED is currently in the process of redesigning its incident-based reporting system (SCIBRS) so that, among other things, the identities of the offenders and victims will be collected, along with the relationship indicators that are already being collected by SLED.

The degree to which sex offenders under community supervision received or were referred to DMH for services (25%) is a finding that highlights the complex nature of sex offenders and the provision of treatment services. It is impossible to know, from the available data, if that level of contact is appropriate or not. Sex offenders may, or may not, possess a myriad of problems (including but not limited to mental health) resulting in a need for treatment services that need to be identified, prioritized and targeted for treatment by available resources. The confounding nature of this finding reinforces the need for a comprehensive assessment of sex offenders on an individual basis so that the treatment needs of each offender can be identified and addressed. It is also important to note that there are no outpatient sex offender treatment programs available through DMH.

It was also interesting to be able to determine how many of the convicted sex offenders (6,951) were actively being supervised by the Department of Probation, Parole, and Pardon Services (566), and how many of these had received outpatient mental health services from the DMH – 143.

Lacking from this analysis is information regarding exactly how many convicted sex offenders are currently incarcerated at the South Carolina Department of Corrections (SCDC) and how many mental health services, if any, they are receiving while incarcerated. Data from SCDC was unavailable for this analysis.

### ***Recommendations***

Much work needs to be done regarding collecting and sharing information about sex offenders in South Carolina. This could include:

Additional linkages to the social service agencies to determine if sex offenders differ from other types of individuals in regard to their poverty status, foster care episodes, family income, Medicaid services, foodstamps, etc.

Additional linkages to other criminal justice agencies such as the Department of Corrections as well as the Department of Juvenile Justice (DJJ) should be pursued.

Additional linkages to the Department of Education databases should be explored to determine, as examples, how well these offenders performed in school on Pact tests and Exit exams, as well as their grade retention rates compared with other students.

The sharing of client-level information among state agencies is critical to our full understanding of the subjects of this analysis, i.e., convicted sex offenders. Much work needs to be done in this area, but the process has finally begun and has already produced a wealth of knowledge. Much more is expected.

\*Not a complete year.

Type1 = Total number of records in the Judicial Section for calendar years 1995 through 2004.

Type2 = Number of records with missing CDR codes.

Type3 = Number of records with CDR codes not missing.

Type4 = Number of records with missing CDR codes that have convictions.

Type5 = Number of records with missing CDR codes that do not have convictions.

Type6 = Number of records with CDR codes that have convictions.

Type7 = Number of records with CDR codes that do not have convictions.

Type8 = Number of judicial records with sex offenses, both convictions and non-convictions.

Type9 = Number of judicial records with sex offense (NCIC) convictions.

Type10 = Number of judicial records with sex offenses (NCIC) that do not have convictions.

Type11 = Number of judicial records with “Sex with Minors” (based on literal descriptions of the offense) offense convictions.

Type12 = Number of judicial records with “Sex with Minors” offense (based on literal descriptions of the offense) that do not have convictions.

Type13 = Number of judicial records with sex offenses (based on CDR codes) that have convictions.

Type14 = Number of judicial records with “Sex with Minors” offenses (based on CDR codes) that have convictions.

Type1=Type2+Type3; Type2=Type4+Type5; Type3=Type6+Type7; Type8=Type9+Type10. Type1, Type2, Type3, and Type8 were determined independently.

Type4 + Type6= Total number of convictions.
